

KDDI proposed KYC Fill-in API

- API provides specific information requested by 3rd party/enterprise customer, from the data stored in KDDI's subscribers database
- Three MNOs in Japan have defined common KYC Match/Fill-in API

KDDI proposed KYC Fill-in API

<Precondition>

- 3rd party/enterprise customers need to make contract with KDDI beforehand and have their own 3rd party ID (Membership ID, Service ID) issued. The 3rd party ID is required for the API call.
- 3rd party/enterprise customers also need to make contract with KDDI beforehand for using the KYC Fill-in API and to determine which attributes will be required and to be provided when calling the KYC Fill-in API.

KDDI proposed KYC Fill-in API Flow
